

UPLOADING FILES TO A SERVER WITH FETCH

1. Your web address - or URI (Uniform Resource Identifier)

- Each student has space on our MATC server. It is where you will put all the exercises and websites you create in this class.
- You can look at your space in a browser by putting in your URI (using my name as an example):

<http://caweb.matcmadison.edu/Students/Spring2012/AFoley/>

This is what you put in Firefox or Safari to look at one of your webpages. Capitalization is relevant, so be sure to capitalize Students and the rest.

2. Uploading files to your website with Fetch

- You will put your exercises and websites on the server using an FTP (file transfer protocol) software called **FETCH**.
- When you open Fetch, it will ask you for the :
 - **HOSTNAME,**
 - **USERNAME,**
 - **CONNECTION MODE** and
 - **PASSWORD.**
 - You fill them in, click connect and there you are.
- If you are logging in at school, you can click on the Favorites heart and the information will be filled in for you.
- Click the Put icon to put files on the internet; Click the Get icon to get them back.
- Or you can drag and drop

This is how the Fetch login window should look
