SIMPLEVIEWER WEB GALLERY WITH ADOBE BRIDGE
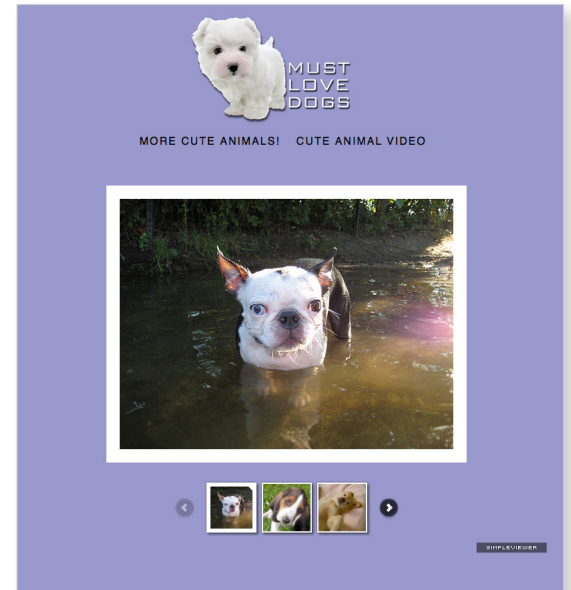

Due Tuesday, December 11

1. **SimpleViewer is a little free software that you use to create galleries. There are two ways to use it:**

   • Download and install the software from **http://www.simpleviewer.net.**

   • Use the version that is bundled with Adobe Bridge.

2. **We're going to use it to create a web gallery of adorable dog photos:**

   • First, we'll prepare a web page in which to put the gallery (to save time, I have pre-created the page for you)

   • Then, we'll create a gallery using Adobe Bridge/Simple Viewer

   • Adobe Bridge does this by creating a web page with the gallery in it.

   • We'll then learn how to put a web page inside a web page using the <iframe> tag.

3. **Prepare the web page.**

   • Open Dreamweaver and create a site.

     » Create a root folder for the site and put it on the desktop

     » Create an images folder for the site inside root folder.

   • From the WebGalleryResources folder you downloaded,

     » Open DogGalleryStart.html and styles.css.

     » Save each as a file in the new site you just created.

   • Attach style.css to the DogGalleryStart.html pages.

   • Insert the Must Love Dogs image right inside <div id="wrapper">. The image is in with the others in the DogImages folder.

4. Create the web gallery

- Open Bridge
- Select **Output** from the view mode
- Select **Web Gallery**
- Select template **Airtight SimpleViewer**
- Select a Style
- In the left column, navigate to the dog photos folder. You'll know you have it when you see the dog photos in the **Content Area**

- Select all the photos in the **Content Area**
- Select **Preview in Browser**
- Adjust output (background color)
- Select **Preview in Browser**
- Create a **Gallery Name**
- Choose the **Desktop** for your Save Location.
- Hit Save. Bridge will create a folder on the desktop with the name you gave the gallery. It will contain the html gallery page and all the backup resources.
- **Move the folder inside the root folder for the site we created in Dreamweaver.**

5. **Insert web gallery into the html page.**

   - Go back to DogGalleryStart.html in Dreamweaver
   - Immediately after the unordered list navigation (which ends with), insert this markup:

   ```
   <iframe src="path/to/index.html" />
   ```

   <iframe>s insert another webpage inside a box "frame" in a webpage.

   It works just like inserting an image - the src is the path to the webpage you want to insert.

6. **Make adjustments to the gallery and to the CSS until it pretty much matches the image of the Must Love Dogs web page.**

7. **Stay organized. Go slow. Know where your folders and files are.**

   - For example, if you don't like the first gallery you create, you can either adjust it or create a new one.
   - When you create a new one, give it a new name so you don't overwrite the old one, unless you want to.
